

LEARN AT CHESTERZOO

At risk of becoming Extinct in the Wild

Name	Jaguar
Scientific Name	<i>Panthera onca</i>
Threats (why they're at risk)	Cutting down trees and being hunted
Distribution (where they live)	Parts of North, Central and South America
Habitat (what they live in)	Rainforests, savannahs and swamp
Diet/Feeding strategy (what they eat and how they eat it)	They eat more than 80 different species of animals! They can hunt on the ground for mammals like tapirs, in trees for monkeys and in the water for turtles and fish
Social behaviour (how they live)	They mostly live alone and mark their territories with urine.
Males and females	Males are bigger than females
Lifespan (how long they live for)	up to 12 years in the wild
Number of young (how many babies)	usually 2 kittens every 2 years
Interesting fact	Black jaguars have the same markings as light jaguars, you just need to look closer to find them
