

HOW TO BUILD A FOOTPRINT TUNNEL

You'll need...

- A large corrugated plastic sheet
- Tape Measure
- Stanley Knife
- Screwdriver
- Velcro
- Shallow dish
- Masking Tape
- A4 Paper
- Paper Clips
- Poster paint powder
- Vegetable Oil
- Cat Food
- Gloves

All you need to do is...

1. Use the knife to cut off a strip of the plastic sheet which is just less than a fifth of the total width of the sheet and put the strip aside for now.
2. Score the middle, quarter length and three-quarter lengths along the remaining sheet with the screwdriver.
3. Stick a piece of hook Velcro in each corner of the scored quarter at the end of the sheet.
4. Turn over the sheet and stick hoop Velcro in each corner of the scored quarter at the other end of the sheet. You will now have Velcro each end of the sheet but on opposite sides.
5. Fold the sheet to make a triangular tunnel with the Velcro holding it in place and put aside for now.
6. Stick a piece of hook Velcro in the middle of the strip you cut off in Step 1.
7. Stick a piece of hoop Velcro to the bottom of the shallow dish and place on to the Velcro on the strip.
8. Stick masking tape either side of the dish.
9. Use paper clips to hold a piece of A4 paper in place at each end of the strip.
10. Mix vegetable oil and poster paint powder until its thick and gloopy and spread onto the masking tape.
11. Put cat food in the shallow dish and slide the strip into the tunnel.
12. Place out in a sheltered spot or along a boundary overnight and see who's visited by the morning.

This will fit inside your tunnel once it's complete

Make sure you don't cut all the way through!
