L.O: To compare and contrast the life cycle of mammals, amphibians, birds and insects.

LIFE CYCLE OF AN ORANGUTAN

Photocopy on to card. Cut out the individual cards with images and annotations. Keep together as a set of cards to create a life cycle.

NEWLY BORN
ORANGUTAN

VERY YOUNG ORANGUTAN
DEPENDANT ON MOTHER
FOR MILK

YOUNG ORANGUTAN
LEARNING FROM OTHERS

ADULT ORANGUTAN
MALE

ADULT ORANGUTAN FEMALE
Orangutans give birth to
single young, or occasionally
twins. An unflanged male
can reproduce too. Female
orangutans weigh between
30 and 50 kg.

OLDER ORANGUTAN
Orangutans can live
up to 50 years in the
wild. Both the Bornean
and the Sumatran
orangutans are
critically endangered
through the cutting
down of trees to plant
crops for palm oil.
