

# Classifying Animals in the UK and Rainforests

LEARN AT **CHESTERZOO**

L.O.: To use .... classification keys for living things, giving reasons for why animals belong in particular groups.

## **Success Criteria:**

I can:

- Use an animal classification key to help me group living animals typically found in the UK according to common characteristics
- Use an animal classification key to help me group living animals typically found in the world's rainforest according to common characteristics
- Make and use my own animal classification key
- Give reasons for why animals belong in a particular group
- Make and use my own animal classification key
- Give reasons for why animals belong in a particular group

# Grouping animals

What are the two main groups of the animal kingdom?

VERTEBRATES

The major five groups are:

Amphibian

Fish

Reptile

Bird

Mammal

ANIMALS

INVERTEBRATES

These are some of the major groups:

Annelid

Arachnid

Mollusc

Crustacean

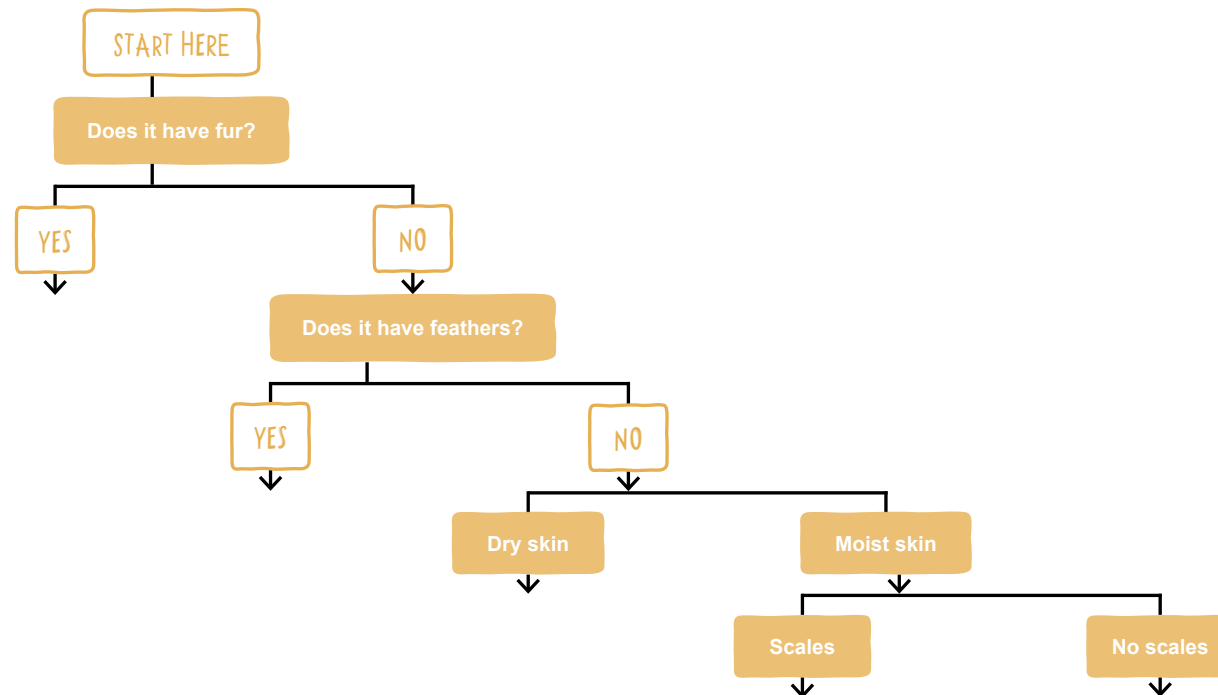

Echinoderm

Insect

Protozoa

# Animal classification key

Can you classify these common UK animals using this key?

# Travelling around the globe

Can we use the same classification key to classify animals from the rainforest?

FROG

ORANGUTAN

PIRANHA

SNAKE

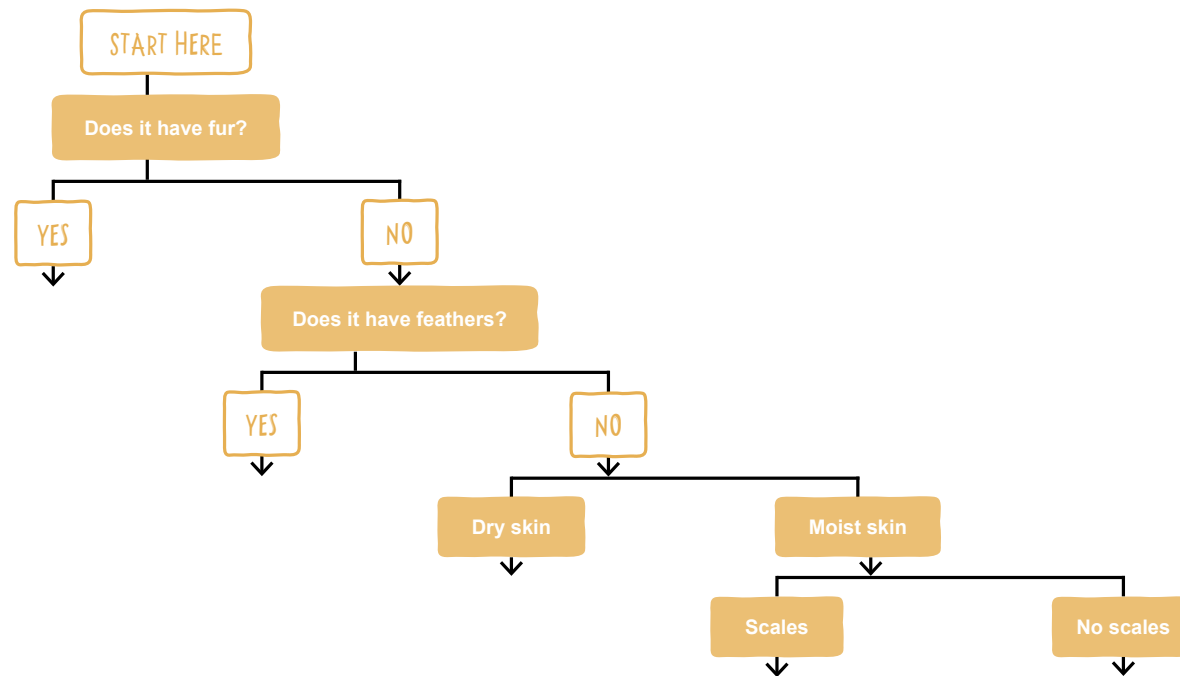

HORNBILL

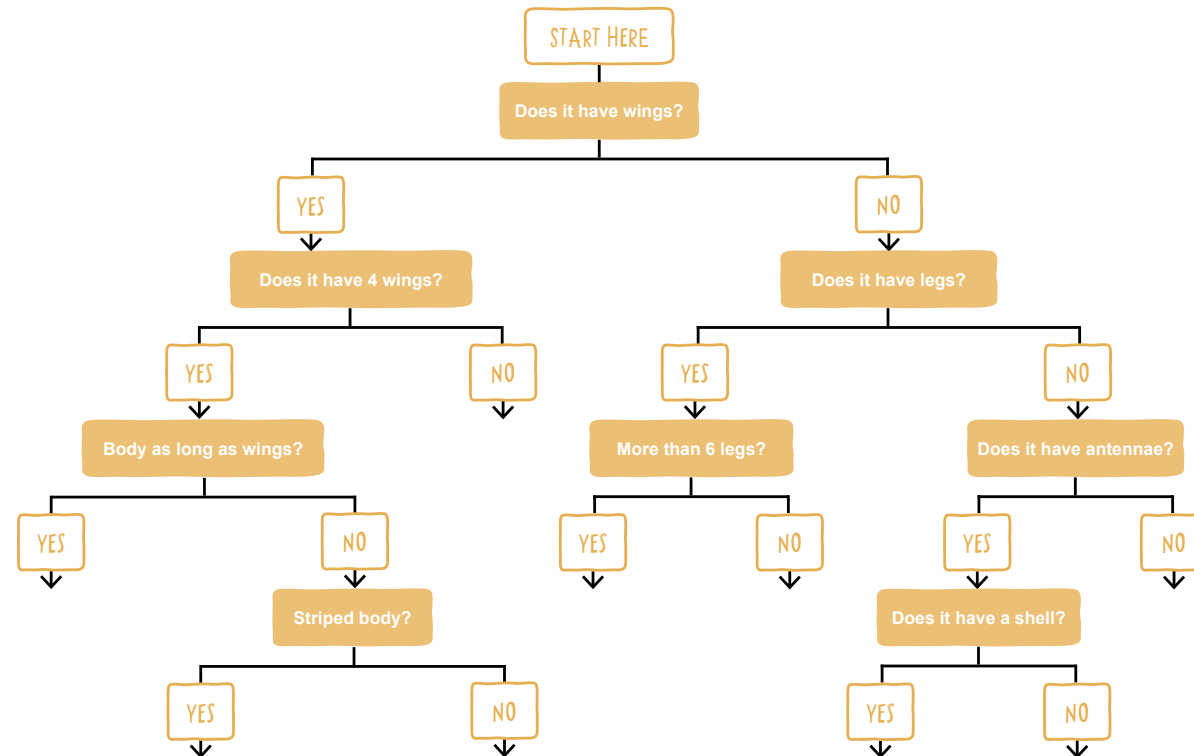

# Rainforest animal classification key

Can you classify these rainforest animals using this key?

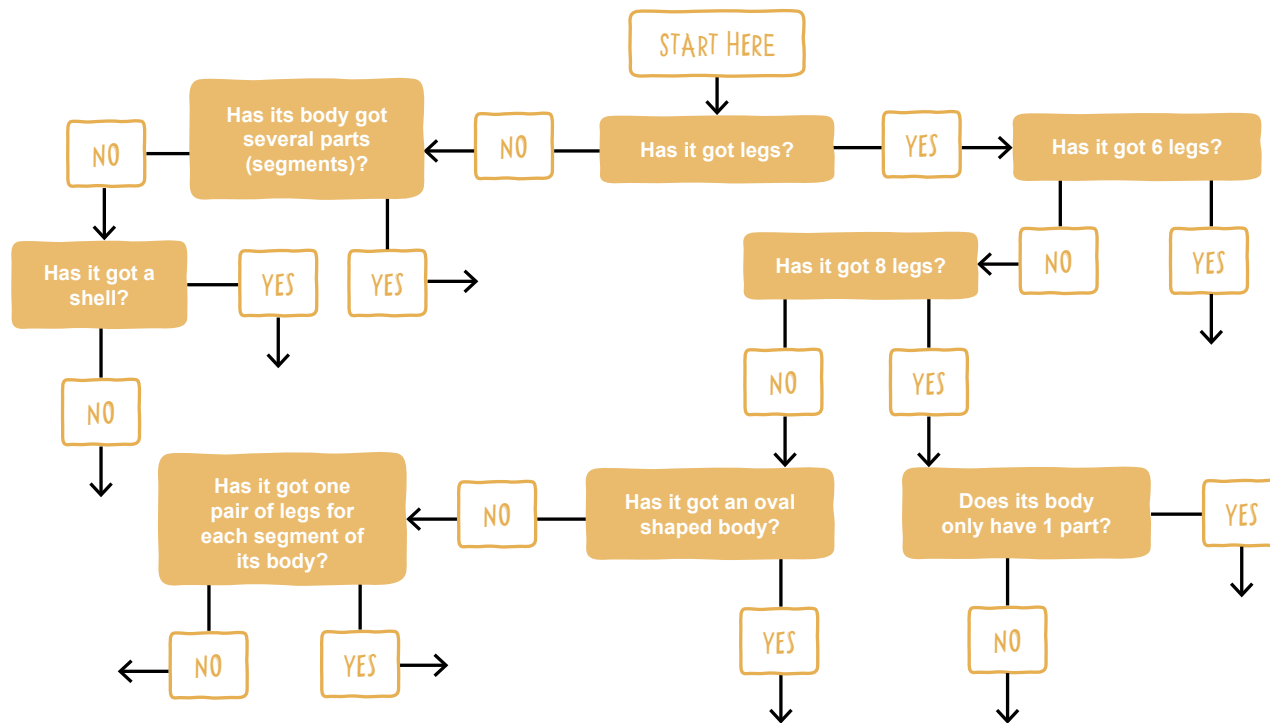

# Animal classification key

Can you classify these animals using this key?

# Animal classification key

Can you classify these animals using this key?

## Task – Classifying animals with a key

## You will need:

- 1 set of 'Animal classification cards - UK and rainforest'
- A blank version of each classification key (vertebrate and invertebrate)

## Instructions:

1. Look at the classification key examples.
2. Choose an animal picture card. Decide if the animal is a vertebrate or invertebrate.
3. Read the pre-written questions on the corresponding classification key (invertebrate or vertebrate), follow the arrows in either the 'yes' or 'no' direction to the next question / characteristic, until you reach the final question on the key.
4. Then classify the animal in to the right group.

## LEARN AT CHESTERZOO

Teacher notes: Print on to paper or card and cut out each card individually. This game is designed to be played in the lesson titled:

### ANIMAL CLASSIFICATION CARDS - UK AND RAINFOREST

 <b>FROG</b>	 <b>GOLDFISH</b>	 <b>SUNDA CHIARI</b>	 <b>NEWT</b>	 <b>RETICULATED PYTHON</b>	 <b>TOAD</b>
 <b>TORTOISE</b>	 <b>FLAMINGO</b>	 <b>SEA HORSE</b>	 <b>TURTLE</b>	 <b>OWL</b>	 <b>COD</b>

# Task – Create your classification key

## You will need:

- 1 set of 'Animal classification cards - UK and rainforest'
- Post it notes/ card and a large sheet of paper

## Instructions:

1. Look at the example 'Classification keys' and 'Animal classification chart'
2. Write your own questions to create a classification key with flow chart arrows
3. Then pick an animal card, one at a time and classify the animal into the right group by following the questions on your classification key

# Classifying Animals - Task

What are your reasons for grouping these animals?

Use the classification chart to help you classify them...

# What have you learned

## Plenary

### Learning Objectives:

To use and make classification keys for living things, giving reasons for why animals belong in particular groups.

### Success Criteria

#### I can:

- use an animal classification key to help me group living animals typically found in the UK according to common characteristics
- use an animal classification key to help me group living animals typically found in the world's rainforest according to common characteristics
- make and use my own animal classification key
- give reasons for why animals belong in a particular group
