HOW TO MAKE A LOG PILE

YOU'LL NEED

- Lots of logs (different sizes and thicknesses)
- Gloves

ALL YOU NEED TO DO IS...

1. Find the right spot for your log pile. A quiet shady area is best. Damp areas are great for toads.
2. Wearing gloves, make a pile of logs. Put the smaller logs in between the bigger ones to help make it stable.

TOP TIPS

- Choose a shady area
- Avoid taking logs from the woods - these may already be wildlife homes
- Hardwood logs are best e.g. beech, oak, ash
- Don't cut the wood into small pieces
- Use 2 wooden stakes on either side to stop the logs rolling away

Logs provide shelter for wildlife like insects, frogs and hedgehogs.
