

Zoo Jobs: Field Conservationist Activity

A field conservationist does their work in the area that an animal is naturally found. They often do studies looking for or identifying animals and learning about how they move and live. This can help to understand animals in their natural environment and how we can help them to survive and thrive.

Your task:

In an area of India, several different species are being studied. Create a symbol for each species and add them in the correct area of the map below.

SPECIES	SYMBOL	LOCATION
Tiger		D2, A3, C3, B3
Langur monkey		E1, A3, B3, A2
Sambar deer		D3, D2, D4, C3
Gharial (crocodile)		D2, D1, C1, A2

What areas have the most species sightings?

Why do you think animals might gather there?

Write one idea how scientists could help protect that area.
